

## Technical Bulletin: Product Updates

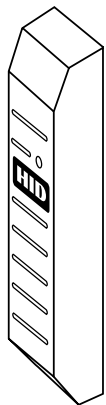

**6005B – ProxPoint Plus • 5365E – MiniProx • 5395 – Thinline**

**HID is proud to announce updated versions of our most popular proximity readers. Most of the changes are internal, but some of them will impact installation and ordering.**

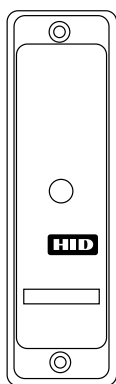

**New Electronics** – Based on the revolutionary HID Reader MCM, these readers provide equivalent read range and draw less current than previous models, while providing the same wide range of features and configurations with legendary HID reliability. The new voltage specification is 5.1 – 16VDC; current draw is 60mA Peak / 35 mA Average / 7 mA minimum.

**New MiniProx Housing Design** – While keeping the classic MiniProx styling, the housing has been reconfigured as a potted base unit with a snap-on cover similar to other HID readers. Covers are now available in four colors (Grey, Beige, Black, and White).

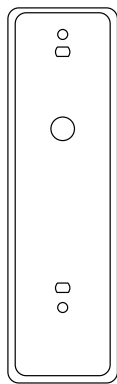

**NEW MINIPROX SNAP-ON COVER SHOWN “POPPED OFF” OF POTTED BASE**

**PREVIOUS MINIPROX MOUNTING HOLES**

**NEW MINIPROX MOUNTING HOLES**

Snap-on covers can be easily replaced in the field, when readers are vandalized, scratched or painted, or if you simply want to redecorate.

When replacing an old MiniProx with a new one, please note that the reader footprint is identical to previous model, but the lower mounting hole and cable exit holes have been repositioned. A new reader will cover all preexisting holes if the same top mounting hole is used. Mounting screw holes

in the cover have been eliminated. The terminal strip model now has terminal screws located inside the reader, under the cover, not on the back.

**New ProxPoint Features** – Now renamed the ProxPoint Plus, this reader now has a beeper, plus additional inputs for external control of the beeper and LED. Beeper and LED operation is now configurable by using Command Cards in the same manner as MiniProx and Thinline.

The ProxPoint Plus' housing depth has been increased by 0.10" to accommodate the newly added beeper. All other dimensions and mounting holes are the same as the previous model.

**Thinline II** – All changes are internal and transparent to the user.

### Ordering Changes

**ProxPoint Plus** has the same part number as ProxPoint with a NEW REV Letter 6005B. It now has the same configuration options as MiniProx. The previous model ProxPoint 6005A is no longer available.

**MiniProx** has the same part number with a NEW REV Letter 5365E. It is now available in four colors: G – Grey, B – Beige, K- Black, W – White. The previous MiniProx 5365C is no longer available in most MiniProx models, and any existing “C” inventory will be sold until depleted. Customer Service will contact any customers who order the “C” version to advise them of the model change, and the packing list will also indicate the model change.

**Thinline II** ordering is unchanged.

**Pricing** – Consult Customer Service for exact pricing. The ProxPoint Plus is now a better value with the addition of new features.
